IDENTIFYING DECEPTIVE PUBLISHERS: A CHECKLIST

Deceptive publishers (also commonly referred to as “predatory journals”) are for-profit entities that purport to publish high quality academic research, but who do not follow accepted scholarly publishing best practices. Their ultimate goal is to make money, not publish quality research. A deceptive publisher may acquire the copyright to your research but never publish. A deceptive publisher may publish your work, but then disappear, resulting in there being no public record of your published article.

The aim of this checklist is to assist you in avoiding publishing your work in a low-quality deceptive publication. Being associated with a deceptive publisher can lead to financial loss as a result of inappropriate fees, or be harmful to your reputation and that of your institution, even possibly impeding promotion and tenure.

If any of the following statements are true, do not submit your work. These are tactics commonly used by deceptive publishers:
- Publication is guaranteed
- You received a spam-like unsolicited email invitation to publish work (Note: these are different in nature than emails received from organizations or societies you belong to or have published with in the past)
- The articles published in the journal do not match the journal’s title and stated scope

Common Practices of Deceptive Publishers

While there is no single criterion that points to whether or not a publication is legitimate, the following are some of the typical practices used by deceptive publishers. An accumulation of negative indicators can point to a deceptive publisher.

---

**PROCESS AND TIMELINE**

Much of this information can be found in author guidelines or instructions. This information should be clearly presented and address quality control processes, style/formatting, copyright, and other journal policies (such as corrections and retractions). Legitimate journals will always ask for payment after acceptance, and their fees are clear and easily available.

- Publication is guaranteed
- The time of submission to publication is unexpectedly short
- The peer review process is unclear, lacking information, or not publisher’s website.
- There is minimal information about the various steps in the process.
- In some fields, a modest submission or membership fee is charged at the time of manuscript submission. These fees fund editorial or peer review. In other cases there are post-acceptance fees, which might include page, colour or figure charges. The script. Most open access journals will apply a Creative Commons (CC) license to the research that allows for reuse and remixing; outlined on a journal’s website or policies. Look for unconvenin many cases, the author will retain copyright. If a journal isn’t accepted practices. The journal does not follow a regular publication schedule.

---

**ARTICLE PROCESSING CHARGES (APCs)**

Many open access journals ask for Article Processing Charges (APCs). This is an acceptable practice. Legitimate journals will always ask for payment after acceptance, and their fees are clear and easily available.

- APC payment is required before acceptance
- APCs are generally paid post-acceptance but pre-publication. You should not be asked to pay for an APC before the peer-review process begins. These charges should be clearly listed on the apparent publisher’s website.
- It is unclear what fees will be charged process from submission to publication.
- The journal does not follow a regular publication schedule.

---
WEBSITE AND CONTACT INFORMATION

- The journal’s name is easily confused with another better known journal in its field. Consider looking for contact information including a telephone number and mailing address and check to see that the contact information aligns with the journal’s other claims (i.e. the telephone number area code matches where the journal is based, the mailing address is not a private residence). Most publishers will have a general email account you can contact; be wary of email addresses that may be non-professional or have no affiliation with the journal (i.e.: a Gmail or Yahoo email address).

- The journal website looks amateurish or unprofessional. You may find that the journal’s website is poorly designed and difficult to navigate, including dead links, as well as spelling and grammatical errors. While many legitimate journals may be poorly funded and lacking professional websites, errors and broken links are indicators that warrant a closer look at the journal.

SCOPE OR SUBJECT MATTER

- The journal lacks a well-defined scope, subject area or mission. Journals generally have a clearly defined scope and focus on a fixed set of topics.

- The articles published do not match the title and stated scope and/or the journal title. For example, a nursing journal that publishes geology papers.

INDEXING, IMPACT FACTOR AND ARCHIVING

- The journal is not indexed where it claims to be nor where you would expect to find the subject content. This is verifiable information. Consider the databases that you use to find research (e.g. Scopus, Web of Science, Sociological Abstracts, or PubMed, etc.). Is the journal included in these indexes? Note that Google Scholar, SHERPA/RoMEO, ORCID and scholarly networking sites like ResearchGate are not indexes. Claims about impact factors are not verifiable:
  - Deceptive publishers may list fraudulent metrics such as the “Global Impact Factor” (GIF), Index Copernicus, or “Universal Impact Factor” (UIF). These are not based on recognized methodologies.
  - Recognized metrics include Clarivate’s Journal Impact Factor (JIF) and Elsevier’s CiteScore among others. The University of Toronto Libraries offers licensed resources such as Journal Citation Reports and Scopus to verify this information. Visit the Research Impact & Researcher Identity guide for more information. Not all journals are indexed in these resources and newer journals may not have journal level metrics available.

- The journal website does not provide access to previously published volumes or has volumes that are incomplete.

AFFILIATION/PUBLICATION ETHICS AND POLICIES

- The publisher is not a member of a recognized scholarly organization. Deceptive publishers may falsely represent their affiliations. It is best to verify stated affiliations via the website of the organization a journal claims to be affiliated with. The following are some recognized organizations: • AJOL (African Journals Online) • COPE (Committee on Publication Ethics) • DOAJ (Directory of Open Access Journals) • INASP (International Network for Availability of Scientific Publications for journals published in Bangladesh, Nepal, Sri Lanka, Central America and Mongolia) • OASPA (Open Access Scholarly Publishers Association) • WAME (World Association of Medical Editors)

EDITORIAL BOARD

- Please note it can be very difficult to verify who is on an editorial board, so it is good to cross-check to ensure the information is accurate. Members of the editorial board do not mention the journal on their own websites or public CVs.

- There is no information about the editor or editorial board on the journal’s website.

DO NOT CONFUSE JOURNALS FROM THE GLOBAL SOUTH WITH DECEPTIVE JOURNALS

- When deciding whether to publish in a journal, please remember that some of the same criteria used to disqualify deceptive publishers can also disqualify journals from the global south. In low- and middle-income countries, journal publishers may not have access to the resources to create impressive websites, register an ISSN, or maintain their own email server. A lack of resources should not disqualify these journals from your consideration if they are publishing high-quality research. A careful review of the journal’s address and a discussion of the journal with your colleagues or supervisor will always be your best guide.

NEED FURTHER GUIDANCE OR SUPPORT?

- Talk to your supervisor and colleagues.
